

Condensate pumps type EE300

Centrifugal condensate pump EE400 NEO with reservoir and high flow rate (max. 200 l/h).

The capacitive sensor technology and a strong housing made of ABS (Acrylonitrile-butadiene-styrene) make this pump suitable for, among other things, the discharge of condensate from condensing boilers. Capacitive sensors are durable and ABS is chemically resistant to the acid condensation water from condensing boilers. An integrated anti-return valve prevents water from flowing back to the pump.

Application

- Split units up to 50 kW
- Cooling units, dehumidifiers and condensing boilers

Specifications

- Max. flow rate: 200 l/h
- Max. flow height: 4 m
- Condensate reservoir : 1 l
- Alarm contact: 230 VAC, 3A - NO/NC

Dimensions

- (L x W x H): 200 x 105 x 160 mm

Technical data

- Electrical data: 230 V, 50/60 Hz, 65 VA
